

Peyton Lindogan

peyton2117@gmail.com | www.linkedin.com/in/peyton-lindogan/ | 252-732-0035 | Palm Beach Gardens, FL

Data product manager with delivery experience across the energy value chain: generation operations, energy trading, distributed energy, SAP financial systems, and enterprise data strategy.

Technical: Databricks (Delta Lake, PySpark, DLT, Unity Catalog, Databricks SQL, Workflows) | Python, SQL | SAP BW, SAP Analytics Cloud | AWS (Glue, Redshift) | Power Apps | Six Sigma Green Belt

RELEVANT EXPERIENCE

Data Product Manager; NextEra Energy Inc., Juno Beach, FL Jul. 2025-Current

- **Financial forecasting automation:** Technical delivery lead for a data product serving FP&A and the Power Generation Division, automating forecast-to-actuals comparison across 4 core models and replacing a manual 8-month budgeting cycle.
- **Technical direction:** Prototype data models in Databricks and hand them to engineering to harden, and make the call when the team surfaces competing technical approaches, selecting for fit to the use case rather than deferring the decision.
- Own a multi-million-dollar budget, the product roadmap, and technology valuation for a cross-functional team of 8, brokering one committed delivery timeline between two business units with competing priorities and presenting delivery and data provenance to CEO-level reports.
- Authored and ran an RFP to secure additional Databricks engineering capacity, aligning stakeholders through vendor selection.
- Cut a Databricks-to-SAP Analytics Cloud integration from scope once vendor escalation and multi-team troubleshooting outweighed its value, redirecting the team to a path already proven in testing and keeping the decision reversible.
- **Platform enablement:** Opened Databricks self-service to 100+ users across the Power Generation Division, negotiating access through the platform team and driving adoption through hands-on training and a data steward model assigning ownership by data domain.
- **SAP CAMS migration (FPL):** Led reporting prioritization on a \$500MM SAP migration at FPL, negotiating 19 business units from 1,500+ requested reports to a committed 700-report scope and aligning 4 development teams on a single delivery roadmap, modernizing reporting for renewable asset accounting, month-end close, and reimbursement teams.

Data & Strategy Analyst, Rotational Program; NextEra Energy Inc. / EverBright, Juno Beach, FL Aug. 2023-Jul. 2025

Four rotations spanning enterprise data strategy, distributed energy, generation operations, and energy trading.

- **Enterprise data strategy:** Sourced and qualified data opportunities across 100+ enterprise initiatives, building the business cases that turned them into scoped engineering commitments with business unit owners and tracking realized value over time; co-designed the operating model that let the organization deploy ~\$45M in new data program funding, expanding data entitlement by 40%.
- Automated GenAI adoption metrics in Python, providing visibility across 15,000+ employees and informing CEO-level communications.
- **Distributed energy (EverBright):** Owned forecasting, measurement, and payment reporting for a 42 MW virtual power plant delivering \$7MM+ in net income, determining which customers were paid back and how much; profitability analysis across 10,000 customers drove continued-investment decisions on VPP programs.
- **Operations and process:** Built a Python classification algorithm for ticket routing that automated manual triage, returning reimbursement answers 20 business hours faster and realizing a \$450K NPV outcome for the teams closing the books on renewable site profitability; led a Kaizen across 5 business units identifying a half-day reduction in Month-End close.
- **Energy trading:** Mapped 20+ end-to-end processes across NextEra Marketing teams to inform requirements for a \$50MM energy trading platform replacement, then managed development of a Power App operationalizing 19 SOX controls.

EDUCATION

The University of California at Berkeley Jan. 2025-Current

M.S. Information and Data Science; *Academic Merit Scholarship*

The University of North Carolina at Chapel Hill May 2023

Environmental Science: Quantitative Energy Systems Track B.S.; Mathematics B.A.; Statistics and Analytics Minor

COMMUNITY & AWARDS

- Mentor of the Year; *Children's Home Society of Florida (2024)* – Awarded for long-term mentorship of 3 middle school students.
- Eagle Scout Rank; *Boy Scouts of America* – Fundraised and distributed 500+ hardcover books to kindergartners and libraries.
